CAREER OBJECTIVE

Experienced and highly adaptive Military Veteran with secret clearance and 14 years of experience with developing and troubleshooting mechanical, electrical, and computer systems. Scheduled to finish Masters in AI and Machine Learning November 2026.

SKILLS

Robotics and Automation

Industrial Cybersecurity

SCADA/HMI

Communication Protocols

Data Analysis

Electrical Systems

Python

Project Management

Reporting and Briefing

EXPERIENCE

SCADA Engineer – QE Solar, Scottsdale (April 2026 – Current)

- Building custom SCADA platform utilizing Ignition and Chariot MQTT services to monitor and track multiple sites with a Dashboard that operators can easily track and update.
- Program Manager of SCADA operations, reported gap analysis and utilized JIRA and Confluence for ticketing, reporting and agile development.
- Utilized C#, Java, and Python to build the back end dev environment for SCADA Development, managed and instructed other users on systems.

Control Systems SME – Microsoft, Phoenix (July 2025 – Current)

- Serve as the Controls SME ensuring secure and reliable operation of OT/ICS systems including BMS/BAS, EPMS, SCADA, PLCs, HVAC controls, and electrical monitoring.
- Troubleshoot complex automation, controls, and network issues supporting datacenter uptime and security baselines.
- Collaborate with OT Security, Networking, and CE leadership to harden controls networks and align with Zero Trust OT principles.
- Conduct RCAs and implement design improvements improving resiliency and reducing recurrence.
- Support incident response for control related alarms, communication failures, and cybersecurity issues.

United States Army – Intelligence Analyst (November 2023 – April 2026)

- Conducted complex intelligence analysis to identify patterns, anomalies, and emerging threats across large, multi-source datasets, supporting risk-informed decision-making.
- Performed detailed investigative assessments and root cause analysis to evaluate adversary behavior, vulnerabilities, and systemic risk factors.
- Synthesized ambiguous and incomplete information into clear, actionable intelligence products for senior leadership and cross-functional stakeholders.
- Applied structured analytic techniques to assess likelihood, impact, and mitigation options for operational and strategic risks.
- Collaborated with multidisciplinary teams to develop mitigation strategies, improve controls, and reduce recurrence of identified risks.
- Produced concise written reports and briefings translating technical findings into business-relevant insights under time-sensitive conditions.

Control Systems Specialist – HelloFresh AZ01, Phoenix (October 2024 – July 2025)

- Configured and tested PLCs to control automation and robotics systems.
- Analyzed network traffic using Wireshark to identify latency issues, improving connectivity and reducing downtime to under 1 percent.
- Performed preventative maintenance and led root cause analyses; assisted with system and network integration.

Control Systems Specialist – Amazon GYR3, Phoenix (January 2024 – October 2024)

- Programmed servomotors and variable frequency drives; performed advanced electrical troubleshooting.
- Used structured text and ladder logic to optimize product flow, increasing throughput and reducing invalid transport.
- Maintained Profibus and Profinet communication protocols controlling facility inputs.

Maintenance and Robotics Engineer II – Amazon GYR3, Phoenix (June 2023 – January 2024)

- Diagnosed and troubleshot robotic, electrical, and mechanical systems through remote software platforms.
- Programmed and troubleshot programmable logic controllers across thousands of assets.
- Performed cloud network analysis and maintained server systems monitored through SCADA and SNMP.

EDUCATION

Masters of AI and Machine Learning (current) – Colorado State University Global

Bachelor of Science (Cybersecurity) – Colorado State University Global (Jan, 2026)
